

The diagram illustrates a material processing system. At the top, a hopper (15) feeds material (18) into a horizontal processing zone (11). A vertical line (16) indicates the feed path. Below this, a large container (20) feeds material (25) into a horizontal processing zone (26). A recirculation loop (27) carries material from the bottom of zone (26) back to the input of zone (11). A discharge line (28) carries material from the bottom of zone (26) to a final destination (29).
